N720 IP PRO Release notes 95

Release date:

August 2015

Version:

95

> **Important**
>
> To be able to add new features in the future, we needed to redesign our upgrade/memory management to free memory. With this new upgrade/memory management system we have extended our future-proof software and operating system. Due to new features implemented in software larger then 89 we urgently needed to change this.
>
> To avoid upgrade problems, we removed the Software 95 and prepared the Software 98 that has the new memory management implemented. This software will be available very soon.
>
> In the situation that your system is already on the BL95 and you need to add additional DECT base/stations, and in case the new basestation has an older software. You can upgrade this base-station via the hidden software page, see below for the procedure.

What's new:

- ...

Enhancements:

- XML phonebook White/Yellow pages search field City optional

BugFixes:

- LDAP:
    - S650H requesting LDAP via INT button makes N720 reboot.
