## How to clean and disinfect your Gigaset pro handset

[S650H PRO](#) and [SL750H PRO](#)

Gigaset professional DECT handsets S650H PRO and SL750H PRO are optimized for everyday business. They are part of the DECT IP multicell- and single cell solutions N870 and N670. Gigaset helps supermarkets, construction markets and medical practices across Europe to optimize their communication solutions.

Using a **viruzid disinfectant** with other aspects such as hand washing is important of preventing and reducing the spreading of illnesses.

Our **Gigaset Pro** handsets are tested with the most common **viruzid disinfectant** used in healthcare.

On the next page, there is a list of approved solutions that will not harm the devices. All those **anti-septics** protect from pathogens.

### Cleaning Instructions

1. Be sure that your hands are cleaned and **disinfected**
2. Before disinfection, pre- clean your **Gigaset Pro** device to remove dust
3. You are free to use **liquid disinfection** solutions or cleaning wipes
4. Apply the liquid disinfection solution carefully, using a **non-abrasive cloth**

# Gigaset
