Technical overview DX800A

Gigaset DX800A The all-round telephone for professionals

The DX800A is a multi-purpose telephone that allows you to conduct calls using VoIP or land-line networks (analogue or ISDN). As your company grows, the DX800A can grow along with it – a maximum of six extra DECT handsets can be connected to the system and four different calls can be held simultaneously. In addition, three different built-in answering machines can be connected to the telephone, each for a different telephone number. When using VoIP account, each line can use an individual network mailbox.

Mobile phones and headsets can be connected using Bluetooth, while the Link2Mobile™ function allows you to call via the mobile network or to receive calls using your mobile. The DX800A has two Ethernet ports (switch), so the telephone can easily be connected to the Internet or your computer. This makes software updates, data synchronisation and accessing online services extremely easy. These innovative features, combined with its modern design, make the DX800A the best choice for the modern office.

Gigaset has a very wide range of handsets that you can connect to the desktop telephone. With Gigaset's cordless phones, you can maximise the freedom of your employees during phone calls.
