

# N870 - Release 2.16.2 (Intermediate release)

## Release Date:

- Intermediate release.

This software has passed the minimum required test cases for Small and Medium Installations. The normal software release procedure contains also the Large-XXL environment test procedures.

## What is new?

- Status page, DECT base if it has "No sync" status will be visible.
- N870 new role, *Integrator only*. With one external DECT manager.
- Firmware update using HTTPS client certificates.
- Auto provisioning using fixed numbering.
- Central phonebook

## Improvements

- Added new PKI Root Certificates
- Handset export/import improvement.
- SIP control termination fixed.
- Provisioning: IPUi using capital letters.
- Add time stamp to Incident.tar file.
- CNIP string should utilize all available space on the display.
- LDAP improvements.
- Provisioning Improvements
- Stability improvements
- User-agent for software download matches the SIP user-agent

## Known Issues

- Provisioning HTTP GET MAC address is now changed to capital letters, this should be changed back to small letters.
- Firmware update will not work if the file name is changed. (Name for this version should stay: einstein-albert-V2.16.2+build.ac574fa.update.bin. In upcoming software, name is not important anymore.)

[N870-V2.16.2+build.ac574fa.update](#)

Fake version to test provisioning firmware update.
