DE700/900 IP PRO 02.00.08

Release Date:

September 2013

Version:

02.00.08

> ⓘ **Upgrade procedure**
>
> 1. For the version after V02.00.00, please use 020008.img for upgrade. It will keep the configuration data.
> 2. For the version between V01.01.10 (included) and V01.01.14 (included), please use full_020008.img for upgrade. It will reset all the configuration data.
> 3. For the version before V01.01.10, please use full_010114.img for upgrade. It will reset all the configuration data. And then use full_020008.img for upgrade.

Enhancements:

- As a user I want to assign functions to preprogrammed function keys
- As a NetDirectory user I don't want to enter on my own complete search criteria
- Support of Client and Server certificates
- SIP diversion header - as a user I want to get information if a call is diverted from somewhere
- As a User I want to store all settings and data in one file for backup needs
- Configurable period for checking the Profile
- DExxx - XML-Based Central Phone Book
- Accept incoming SIP requests only from previously addressed SIP servers
- Phone doesn't need to perform auto-lookup for incoming anonymous call.
- XML-based NetDirectory: private pages to be supported
- Dialing Plan optimization behind Gigaset and Gigaset T300/T500 PBX
- Support of different SIP privacy mechanisms (RFC3323)
- LDAP implementation optimization
- optimized provisioning server URL processing
- Autoprovisioning: increased number of possible parameter
- Optimized Firmware update/downgrade
- Include Activation-Code provisioning for provider
- Hidden page in WebUI for T300
  /T500
- Implement SIP USER ID in XML HTTP GET
  request
- Interop Timico
  MWI

Bugfixes

- [Broadsoft] Clic-to-Dial; Second call doesn't work
- Phone answer the incoming call directly, when another call is on hold
- If user presses the corresponding flashing Line key, the incoming call should be answered
- No firmware update or downgrade possible if BLF key configured
- Phone reboot after pressing Dial SK via call list
- If only a number is defined, the default number is copied to the surname field
- After using outgoing calls list timeout, phone return to idle during one call is on hold state
- 22_beep.mp3 belongs to factory default ringtones
- After restore the config file, phone should check whether user uploaded ringtones still exist or not
- After connecting extension module to DUT, DUT works slowly
- After pressing "Play" in Voice Mail, phone could not work normally anymore except reboot it
- User can't answer the call doing copy to directory via call list
- Some data missing during use of GQS
- Wrong log parsing on the web interface (related to openvpn)
- Unexpected reboot in redial list
- Wrong criteria in the online directory search request
- [DECT Handset] There is no speech path if you start call using Headset button and other party will answer
- Key tones are turned on automatically after turning on WLAN
- It is not possible to dial out, by pressing hands free button or pickup receiver, from Outgoing Calls list
- Phone does not inform about incoming call during the radio is playing
- [provisioning] wrong HTTP digest authentication when plain XML is used

- Reset while using scroll wheel in online directory
- Phone numbers in Call list are scrolling in a loop
- Only Gigaset T300/T500 voice mailbox is available
- Sporadic reboot
- After uploading caller pictures DUT works slowly
- VM MWI problem | ihub ITSP

Known Issues

- Inconsistent VPN files' name processing
