

FAQ Nx70 - License: Download license request file

Download the License file

To request a new License, you first need to download the request file from the device.

The request file contains basic information about the system like:

- Hardware information (MAC address of Master DECT manager)
- Software version
- Number of connected DECT managers / Base stations / handsets
- Enabled licenses
- Country selection
- Data and time
- Provider / profile name

The file content is encrypted.

In the Integrator web-interface go to **SETTINGS - System - Licensing - Create Request File**

The License request file is downloaded.

(Screenshot is from an N870 switched to Integrator only mode)

The screenshot shows the Gigaset N870 IP PRO web interface. The top navigation bar includes the Gigaset logo, 'SETTINGS' and 'STATUS' tabs, and user options like 'Language', 'Help', and 'Logout'. The left sidebar menu lists various system settings categories: Network, DECT Manager, Base stations, Provider or PBX profiles, Mobile devices, Telephony, Online directories, Online services, System (expanded), Web configurator, and Licensing (highlighted). The main content area is titled 'Licence status' and contains a table with the following data:

Item under Licencing	Available Licences	Used Licences	Status
DECT Manager - Multi cell	4	0	Activation period. Days left: 35
Virtual Integrator	n/a	n/a	Activation period. Days left: 35

Below the table, there is a 'Request File' section with a 'Create Request File' button. At the bottom, there is a 'Licence' section with a 'Browse...' button.
