Software versions	
Android	5.1.1
DVF9919	03.641a
Build number	80_1_2.8.96

## Firmware update

### Important

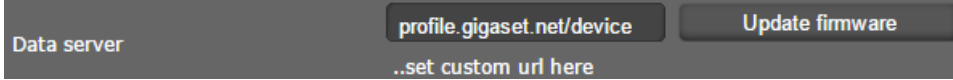

Due to the fact, that Android-5.1 requires a lot of more memory than older Android versions we recommend to insert an [external SD-card](#), or plug in an USB-stick with minimum 2GB free memory space, at least during the upgrade phase!

There are 3 options to upgrade.

## Option 1: Two step Method using an SD-card or USB-memory-stick.

1. Plug in an SD-card or USB-stick with at least 2GB free memory (or enter an external SD card). Then start the Maxwell-10 WEB-UI (click on the Web Server Address - shown in the Maxwell 10 under "Settings=>WebUI - log in (Standard Password is "admin") and follow exactly the following 3 steps:

2. In the web-interface go to: *System - Firmware Update* page and check if the *Data server* field is (default) [profile.gigaset.net/device](http://profile.gigaset.net/device)

Data server    
..set custom url here

3. Press "Save"
4. Press "Update firmware"

The update will be done in 2 steps.

1. Upgrade to new Jelly Bean software with USB drivers upgrade to support the USB memory extension.
2. Upgrade to Lollipop.

## Option 2: One step method using external SD-card.

1. Enter an [external SD-card](#) (or plug in an USB-stick).
2. Download the software via the "Download" button on this page.
3. Unpack the zip file. You will get a .txt file with the Open Source License text and an encrypted zip file which is your firmware image.
4. In the web-interface go to: *System - Firmware Update* page and select the above extracted zip file.

User-defined firmware file

5. Start the upgrade.
