Known Issues:

-

Download URL:

How to update:

Via the webpage:

1. Settings » Management » Firmware update
2. Enter the URL for the new firmware in the **User defined firmware file:** field
3. Click on the button: **Update firmware**

The screenshot shows a web interface for updating the firmware. On the left is a navigation menu with categories: Network, Telephony, Messaging, Info Services, Directories, and Management. Under Management, the following options are listed: Date & Time, Local Settings, Miscellaneous, Reboot & Reset, Save & Restore, and Firmware Update (highlighted in orange). The main content area is titled 'Firmware Update' and contains the following fields and controls:

- Data server:** A text input field containing 'profile.gigaset.net/device'.
- User defined firmware file:** An empty text input field.
- Automatic check for software updates:** Two radio buttons, 'Yes' (selected) and 'No'.
- Update firmwre:** A button at the bottom of the form.

Below the radio buttons, there is a paragraph of text: "On starting the firmware update, the device checks if the requirements of a successful firmware download are fulfilled. The firmware is then downloaded without additional feedback. During the download and update, the handset / base connection is lost. A successful update results in the handset re-establishing the base connection."
