

# FAQ Nx70 - License: Download license request file

## Download the License file

The download of the license request file to order a License is not needed anymore. You can copy the **MAC-ID** from the STATUS page (12 digits MAC address + 4 digits) and add this to the purchase order.

~~To request a new License, you first need to download the request file from the device.~~

The request file contains basic information about the system like:

- Hardware information (MAC address of Master DECT manager)
- Software version
- Number of connected DECT managers / Base stations / handsets
- Enabled licenses
- Country selection
- Data and time
- Provider / profile name

The screenshot shows the Gigaset N870 IP PRO web interface. The left sidebar contains a menu with options: Network, DECT Manager, Base stations, Provider or PBX profiles, Mobile devices, Telephony, Online directories, Online services, System (expanded), Web configurator, and Licencing. The main content area is titled 'STATUS' and displays the 'Licence status' section with a table:

Item under Licencing	Available Licences	Used Licences	Status
DECT Manager - Multi cell	4	0	Activation period. Days left: 35
Virtual Integrator	n/a	n/a	Activation period. Days left: 35

Below the table, there is a 'Request File' section with a 'Create Request File' button. At the bottom, there is a 'Licence' section with a 'Browse...' button.

The file content is encrypted.

In the Integrator web-interface go to **SETTINGS - System - Licencing - Create Request File**

The License request file is downloaded.

(Screenshot is from an N870 switched to Integrator only mode)
