

# FAQ Nx70 - Mobile devices Export / Import

## Introduction

The system has the possibility to Export DECT handset settings and to Import these again.

The Export can have the format

- XML
- CSV

It is designed to use this feature to migrate an existing system to an Virtual/Embedded Integrator system.

Some settings in this Export are read only and can not be changed to another value.

After an Import of these settings, a restart of the system is needed to activate the DECT handsets and SIP accounts.
