

T300/T500 - Upgrade

Software upgrade until version 5.3

Updating the Software of the T300/T500 can only be done online.

Go to: **Configuration** -> **Server** - > **State**

Newer versions to update your software will be listed with:

Prior to the actual update process a backup of the system will be performed. In case of a failure during the update the current state of the system will be recovered without loss of data.

Update notification:

If this setting is enabled, the system will perform a weekly check for a new software version. In case an update is available, the administrator will receive an automated e-mail containing the details of the new version.

[More information can be found here:](#)

Software upgrade from version 5.3 to 5.7 or higher. (Paid upgrade)

The new T300/T500 software 5.7 or higher is based on a new 64 bit kernel. Due to this, the normal online upgrade is not possible, the upgrade has to be done using an USB stick that can be ordered at Gigaset.

[The complete installation procedure is described here.](#)

Software upgrade from 5.7 to higher version.

Updating the Software of the T300/T500 can only be done online.
