

Yeastar S-series - Nx70 autoprovisioning

Introduction

This page describes how the Gigaset Nx70 devices are provisioned behind the Yeastar S-series.

For this wiki article, we used:

- Yeastar S20 software 30.12.0.9
- Yeastar auto-provisioning app version 1.8.24 (Contains Nx70 HTTPS provisioning)
- Nx70 software 2.29.0

Valid for:

N670

N870

Yeastar will send a SIP NOTIFY with Event: check-sync;reboot=true to start provisioning, this means that the device is rebooted to trigger the provisioning. The reboot is a Yeastar requirement as Gigaset devices do not need a reboot.

First steps to connect Nx70

1. Start with an factory default Nx70 with software 2.29.0 or higher.
2. During boot the Nx70 will send a SIP multicast and the device will be visible in the **Yeastar Auto Provisioning App**.

3. Via the **Edit** button configure your device

4. Save the configuration

5. Reboot the Nx70

6. The device is configured after reboot

After this, it is not needed to reboot the device anymore, even if it is mentioned in the Yeastar web-interface.

Changes made in Yeastar are triggered via sip-notify and auto-provisioning is started without a reboot.

Configuration

The following features are supported by the Yeastar Auto Provisioning App.

- N670 up to 20 handsets
- N870 up to 50 handsets (N870 can handle 250 but for now limited by Yeastar to 50)
- LDAP phone-book
- Central phone-book
- Call Waiting
- Voicemail
- Language
- Admin Password
- Tone scheme
- Time zone
- NTP server
- Codecs
- Firmware update

Add handsets/Accounts

You can configure your handsets by selecting the Extension and define the (internal) LDAP service.

Handsets:

<input checked="" type="checkbox"/> Handset1	Extension:	<input type="text" value="1024"/>	Label:	<input type="text" value="N670 1024"/>	LDAP:	<input type="text" value="LDAP 1"/>
<input checked="" type="checkbox"/> Handset2	Extension:	<input type="text" value="1031"/>	Label:	<input type="text" value="1031 Int"/>	LDAP:	<input type="text" value="LDAP 1"/>
<input type="checkbox"/> Handset3	Extension:	<input type="text" value="1000"/>	Label:	<input type="text"/>	LDAP:	<input type="text" value="None"/>
<input type="checkbox"/> Handset4	Extension:	<input type="text" value="1000"/>	Label:	<input type="text"/>	LDAP:	<input type="text" value="None"/>
<input type="checkbox"/> Handset5	Extension:	<input type="text" value="1000"/>	Label:	<input type="text"/>	LDAP:	<input type="text" value="None"/>
<input type="checkbox"/> Handset6	Extension:	<input type="text" value="1000"/>	Label:	<input type="text"/>	LDAP:	<input type="text" value="None"/>

To register the DECT handsets you need to open the Nx70 web-interface and [start registration](#).

Features

- **Call Waiting:** Disable / Enable Call Waiting on all DECT handsets
- **Voicemail:** Disable / Enable the voicemail service on all DECT handsets
- **Central phonebook:** The URL to a [central phonebook](#), this is not the Yeastar (LDAP) phonebook. See below on this page for more info.

Firmware update

Via the firmware update page you can add the [latest Nx70 software](#). (Yeastar require to change the name of the firmware file as no special characters are allowed) You need to start provisioning by entering the Nx70 config in Yeastar and just press save.

Yeastar will send a SIP notify and provisioning/firmware update is then started.

Using your own provisioning template

Yeastar offers the possibility to upload your own provisioning template.

Just create an [XML provisioning file](#) with all settings and upload via the **Yeastar Provisioning App - Upload Files**.

Make sure the name of the file is the **<MAC address>.xml**, see example below.

Auto Provisioning — □ ×

<input type="checkbox"/>	Name	Delete
<input type="checkbox"/>	589ec600c8a9.xml	<input type="button" value="Delete"/>

Central Phonebook

Yeastar offers the possibility to upload and host your own [Central Phone-book](#).

Just create an [Central Phone-book](#) with all contacts and upload via the **Yeastar Provisioning App - Phonebook**.

Auto Provisioning — □ ×

Device List Upload Files **Phonebook** Firmware Upgrade Templates

Contact **Phonebook**

Upload Phonebook

Manufacturer	Phone Series	File Name	Delete
Gigaset		LocalPhonebook_100contacts.xml	

Edit the device settings and go to **Features - Central phonebook**:

The **Phonebook URL** =

Example: https://192.168.178.210:8088/tftpboot/upload/phonebook/LocalPhonebook_100contacts.xml

IP address needs to be changed to match the Yeastar S-series.

The name depends on the phone-book name you have uploaded.
