

# FAQ Nx70 - Messaging and Location license

## Introduction

If you want to use messaging and or location functionality, a license per handset is needed. From software 2.44.0 or higher there will be one license enabled by default that you can use to test AML. If you sell the system to your customer and you need 10 handsets that support AML, you need to buy the license for 10. The first enabled test license is then also a paid license.

- Messaging license per handset
- Location license per handset

Only the handsets that need this functionality needs a license.

Per handset you can enable/disable the messaging and/or location feature.

If no licenses are available, this feature can not be enabled.

Here you can find more info about how to enable/disable the messaging and/or location feature: [FAQ Nx70 - Messaging and Location how to enable/disable per handset](#)

Material description	Part number	EAN-Code
MESSAGING License N670/N870 (License per handset)	S30852-H2714-X11	4250366867540
LOCATION <a href="#">including messaging</a> License N670/N870 (License per handset)	S30852-H2714-X21	4250366867601

The screenshot shows the Gigaset N870 IP PRO web interface. The top navigation bar includes the Gigaset logo, 'SETTINGS', 'STATUS', 'Language', 'Help', and 'Logout'. The left sidebar menu lists various system settings: Network, DECT Manager, Base stations, Provider or PBX profiles, Mobile devices, Telephony, Online directories, Online services, System (expanded), Web configurator, and Licencing (highlighted). The main content area displays the 'Licence status' page, which contains a table with the following data:

Item under Licencing	Available Licences	Used Licences	Status
Messaging	10	10	Licence activated
Location	10	9	Licence activated

Below the table, there is a 'Licence' section with a 'Browse...' button.
