FAQ Maxwell - Dial-tone

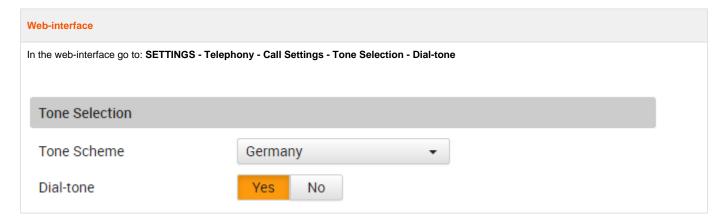

Introduction

A dial-tone is played when the device is in dial preparation phase:

- Pick-up handset
- Press Hands-free key
- Put call on-hold

If users are using a headset, an option to not play a dial-tone is often preferred. When a call is put on-hold so the user can search something or a number, the headset will play the dial-tone and this is not user friendly.

From software 3.17, we offer the option to disable the dial-tone.

Auto-provisioning

Parameter	Description
Telephony.DialTone.Enabled	1 (Default) = Dial-tone is enabled (Yes)
	2 = Disabled (No)
Example:	
<pre><?xml version="1.0" encoding="UTF-8"?> <pre>cprovisioning version="1.1" productID="mx3b"></pre></pre>	
<nvm></nvm>	

	elephony.DialTone.Enabled" value="0"/>
	elephony.DialTone.Enabled" value="0"/:
