

FAQ Broadsoft

Introduction

BroadSoft is a leading global provider of software that enables mobile, fixed-line and cable service providers to deliver real-time communications over their IP networks.

Interoperability Technology Partner Program

BroadSoft supports an extensive interoperability, providing assurance to telecommunication service providers that Session Initiated Protocol (SIP) devices work seamlessly together with the BroadWorks platform.

All Gigaset devices are broadsoft certified, [click here](#) to see the results and certification documents.

BroadWorks Xtended Service Platform (XSP)

The BroadWorks Xtended Service Platform (XSP) enables a variety of ancillary interfaces on BroadWorks. The primary interface exposed by the XSP is the Xtended Services Interface (Xsi) – which provides a rich set of Web 2.0 interfaces for integrating BroadWorks services with desktop clients as well as Internet based applications.

Feature is available for:

- [DE900/700 SW 02.00.11 or higher](#)
- [DE410/310 SW 02.00.08 or higher](#)
- [Maxwell 10 SW 1.2.0 or higher](#)

BLF keys in a Broadsoft environment.

Busy Lamp Field (BLF) will show the status of other users connected to your Broadsoft environment. The device has to subscribe itself to a Broadsoft BLF list, [see here how the configuration is done](#).

Autoprovisioning
