# FAQ Address Book

## Introduction

An Address Book is a database used for storing entries called contacts, each contact entry usually consists of one or more fields like:

- First Name
- Last Name
- Address
- Telephone number
- ...

The Address Book can be stored

- Locally in the device
- Network
- Online

## Local Address Book

The Local Address Book is stored in the Device, each Gigaset device has a Local Address Book and per device there can be a difference with the total number of contacts, number of fields that can be stored.

## Network Address Book

This will provide the possibility to create an Address Book in the network that allows to organize and manage all of the contacts through a single interface and make it available on all Devices. Network Address Book can be placed on:

- PBX
- External Server
- Other software packages with integrated Address Books

There are also different Protocols available to connect to these Network Address Books.

- LDAP
- XML
