

Firmware N510 IP PRO

Online update:

The firmware is available online. Newer firmware versions can be uploaded manually, using the URL provided in the release notes.

- Software update can only be done via the HTTP protocol. **HTTPS is not supported.** (N670 supports the HTTPS protocol also)

You can easily initiate the update via these 3 steps: -

Prerequisite: The phone is connected to the Internet.

Via the Handset:

1. Menu » Settings » System » Update Firmware
2. Enter base station system PIN (default setting: 0000)
3. Press the display key "Yes" to start the download

If your firmware is already up to date, the handset will inform you. No action is then needed.

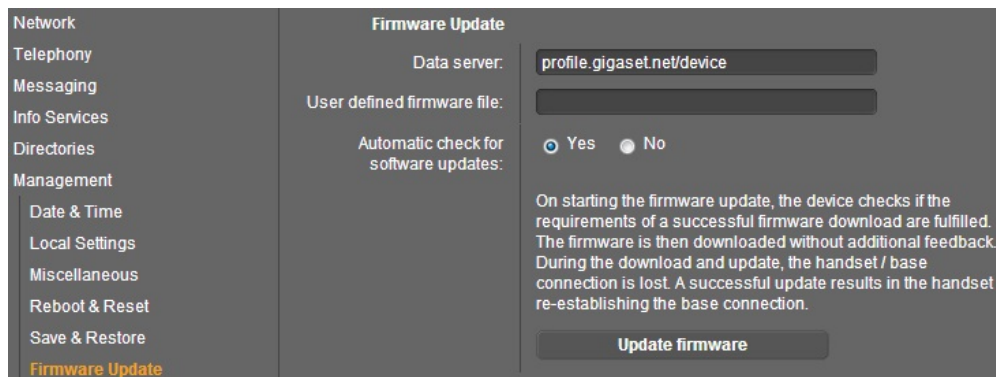

Via the webpage:

1. Settings » Management » Firmware update

Manual update:

Via the webpage:

1. Settings » Management » Firmware update
2. Enter the URL for the new firmware in the **User defined firmware file:** field
3. Click on the button: **Update firmware**

The screenshot shows the 'Firmware Update' section of the Gigaset N510 IP PRO web interface. On the left is a sidebar menu with options: Network, Telephony, Messaging, Info Services, Directories, Management, Date & Time, Local Settings, Miscellaneous, Reboot & Reset, Save & Restore, and Firmware Update (highlighted in orange). The main content area has the title 'Firmware Update' and three input fields: 'Data server:' with the value 'profile.gigaset.net/device', 'User defined firmware file:' which is empty, and 'Automatic check for software updates:' with radio buttons for 'Yes' (selected) and 'No'. Below these fields is a text block explaining the update process: 'On starting the firmware update, the device checks if the requirements of a successful firmware download are fulfilled. The firmware is then downloaded without additional feedback. During the download and update, the handset / base connection is lost. A successful update results in the handset re-establishing the base connection.' At the bottom of the main area is a button labeled 'Update firmware'.

Behind the Gigaset T500/T300 using special module to update firmware files.

A special module is made that download the files automatically from our Gigaset server and places the new files on the PBX, [click here](#).
