

FAQ - N-Way conference

Valid for:	N610	N670	N870	N870E	Embedded Integrator	Virtual Integrator
------------	------	------	------	-------	---------------------	--------------------

Valid for N610 / N670 / N870 / N870E. Software 2.52 or higher is needed.

With this newly added feature, you can setup a conference using the N-way feature of Broadworks.
It offers the possibility to initiate large conferences on the Broadworks platform, straight from a Gigaset professional handset.

For conferencing using the N610/N670/N870/N870E IP PRO , there are 3 options:

1.	Local, Nx70 is conference host.	As this feature is available since the introduction, please refer to the manual for more details on usage. When using the local conference feature, N-way cannot be started. If you need to start a conference with more than 3 participants, please use option 2 or 3.
2.	Start a conference, Broadworks is the conference host.	Starting a N-Way conference from an idle handset. You can find the "how to use" instructions below.
3.	Initiate a conference while on call, Broadworks is the conference host.	Starting a N-way conference while there is an active call. You can find the "how to use" instructions below.

Enable N-way.

You can find the "how to enable" instructions below.

2. Start a conference, Broadworks is the conference host

Step 1	Step 2	Step 3	Step 4

Call</div>

End Conference

When the initiator ends the call to the N-Way Conference box, the conference is ended. All participants will be disconnected.
Press red disconnect key

Call Ended

Conference

32:06

4. Auto-provisioning

The N-way function can only be enabled via auto provisioning.

These two parameters can be added to the provisioning template/file on Broadworks or can be uploaded as a file via the WebGui.

For more information about uploading a provisioning file via the WebGui, [click here](#).

Parameter	
SipProvider.0.ServerConferenceMode	<ul style="list-style-type: none">• 0: off (default)• 1: Broadsoft
SipProvider.0.ServerConferenceURI	conference@<yourDomain>
Example: <pre><?xml version="1.0" encoding="UTF-8"?> <provisioning version="1.1" productID="e2"> <nvm> <param name="SipProvider.0.ServerConferenceMode" value="1"/> <param name="SipProvider.0.ServerConferenceURI" value=" " /> </nvm> </provisioning></pre>	

Download the XML file via button below.

Note: you have to enter your Conference URI in the XML file before uploading it into the system.
