

FAQ - One button Diagnostics, RSSI table

Valid for:	N610	N670	N870	N870E	Embedded Integrator	Virtual Integrator
------------	------	------	------	-------	---------------------	--------------------

Introduction

The rssi table contains information about the DECT signal strength between the base-stations.

- Hex values: 0x0 - 0xFF

```
===== > /tmp/rssi_table.txt
```

RPN	03 02 04
-----	-----
03	2c a6
02	3e 4b
04	a5 3b
-----	-----
eRPN	-- -- --
RSSI	-- -- --

eRPN = current lock-rpn, when external DECT-sync is active
RSSI = received signal strength of external sync-source

How to compare the data with the visualization tool values.

Visualization tool	rssi_table.txt	
Values: 0 - 100	0x0 - 0xFF	
Values: 43 - 100	0x6E (110) - 0xFF (255)	good - excellent
Values: 0 - 42	0x00 (0) - 0x6D (109)	poor

Connection Indication

RSSI range: 43 - 100
good-excellent

RSSI range: 0 - 42
poor

The value Decimal 43 / Hexadecimal 0x6E reflects the value -70 dBm when using the DECT measurement handset.
