

Maxwell 10 Audio

Introduction

The Maxwell 10 supports multiple options for audio when using the Gigaset Phone app.

- Gigaset DECT handset
- Gigaset wired handset
- Wired headset
- Wireless headset (EHS)
- Handsfree

Note: Using EHS and RJ9 headset in parallel is a supported use case and can lead heavy audio flow problems.

Audio third party apps.

At this moment third party phones apps are only supported with handsfree and USB devices. We plan to support all audio parts of Maxwell including handsets and headsets in an upcoming release.
