The first time online

Introduction

Every Gigaset device that is connected for the first time will follow the default provisioning procedure and will try to get the provisioning server URL using the described methods.

- Automatic firmware update is disabled
- All certificates will be accepted (Except Maxwell 10, here you must acknowledge using the message on the touch screen)
- When the device is redirected to a xml configuration file, this will be downloaded.
- When the configuration file is a valid file for this device, the settings will be used.
