FAQ T640 T440 System settings - Import queue log

Introduction

In the administrator web-interface: **Administration - System - Systems settings - Basic settings** you have the option "**Import queue log**"

The parameter "**Import queue log**" checks, if the Asterisk queue log from /var/log/asterisk/queue_log gets imported in the T640/T440 database.

Normally this log is a file, and if required we need to have those information in the database to use a reporting server to analyze and display the data.
