DE310/410 IP PRO 02.00.05

Release Date:

September 2013.

Version:

02.00.05

Enhancements

- As a user I want to assign functions to pre-programmed function keys
- Speed dial function via numeric keys longpress (1-9 keys)
- Activation-Code provisioning for provider
- Optimized Firmware update/downgrade
- Support of different SIP privacy mechanisms (RFC3323)
- Accept incoming SIP requests only from previously addressed SIP servers
- Configurable period for checking the Profile
- As a User I want to store all settings and data in one file for backup needs
- Phone doesn't need to perform auto-lookup for incoming anonymous call

Bugfixes

- Phone sends DHCP Release when rebooting (it is configured at static IP)
- Data server URL should have less than 256 chars
- If connection is on hold, user can't make other outgoing calls via directory
- Short press NKU key during one call is on hold, LSK and RSK should be Back and Dial
- DE310 loose static IP Address in special situations
- Return to incorrect web page after restoring backup settings
- Dial out with empty name/number when outgoing calls list doesn't have any records
- If phone do not plug in network cable, screen always stop at the end of process bar but not enter to the idle screen
- After unplug the network cable, screen doesn't show "No network connection" message
- Problems with special characters in the LDAP-Access (aou)
- [provisioning] wrong HTTP digest authentication when plain XML is used
- Only Gigaset T300/T500 voice mailbox is available
- Interop Timico MWI
- No firmware update or downgrade possible if BLF key configured
- It is not possible to dial out, by pressing hands free button or pickup receiver, from Outgoing Calls list
- Reset while using scroll wheel in online directory
- Phone numbers in Call list are scrolling in a loop
- VM MWI problem | ihub ITSP
