

Provisioning create XML file via Online Tool

Introduction

Gigaset offers an Online tool to create the XML auto provisioning files for the different devices.

The access to this tool is the same like our [redirect server](#).

<https://prov.gigaset.net/Editor/#loginPage>

The Login user name and password is provided by Gigaset.

Create Configuration file

Create Configuration file.

Select the option **Configuration file editor**.

Click on **Add new** to create a new configuration file.

Select your **device** and the **Firmware version**.

Select the parameter(s) you would like to change and the value.

When done, enter the **File name**. (No capital letters are allowed)

When you download the configuration file, it will be a zip file containing the xml file you created.

Provisioning Tool - Configuration file editor

This application enables you to edit an existing or create a new configuration file. The editor offers input fields for settings for a selected device type with various examples, default settings and help icons.

Select one of your configuration files from the list

No.	Configuration file	Comment	Changed On
1	g003_coolit_160715_0101		2016-07-15 09:21:06

The configuration files are stored in the Gigaset Public Server

Buttons: Back, Edit, Delete, Download, Add item
