Gigaset MAC client

Release date:

03-2013

The Gigaset Client for Mac is a native desktop integration for Mac OS 10.7, 10.6 and 10.5.

It allows users to make calls and fax from any Mac application with simple a mouse click. With incoming calls, the data of the caller is automatically displayed, and - if available - even an image. A call-back is easily initiated by clicking on the green handset symbol from within
the missed call list.
The Gigaset Mac client also contains a unified communication interface through which numerous functions can be initiated and controlled using AppleScript.

Feature High-lights

- Call notification
- Display of incoming and outgoing calls via Gigaset PBX
- Name resolving from the Mac OS X Address Book
- Initiation of outgoing calls via keyboard shortcuts
