

T640 T440 Release notes 1.1.1

Release date:

April 2016

Version:

1.1.1

Important

If you come from a software version below 1.0.9, the Media-gateway will be updated with new firmware (Improved fax support). This means when the update is started, the Media-gateway will reboot 3 times after the update is ready. The update of the Media Gateway takes ca. **15 minutes**.

!!! A system reboot is necessary when the IP-phones can't register to the PBX system !!!

New Gigaset DE900/700/410/310 **02.01.00** software is delivered with this software. To avoid upgrade errors during the reboot of the Media-gateway, the automatic device firmware update will be disabled.

You have to enable this after system is up and running via the menu **system Settings - Provisioning**

What's new:

- Support for Maxwell Basic and Maxwell 3 (initial support: provisioning, hot-desking, key-programming)
- SW update V098 for N720
- glibc security update

Enhancements:

- Contacts: Delete all global contacts option now available
- Contacts: Email field is added to contact information
- Fax: Outgoing TSI prefix can be deleted now
- Group pickup: User can configure only one group-pickup key
- Permissions: GUI items can only be activated if parent is also activated
- Provisioning page: IP address of devices are shown as HTTP-link
- Queue: Wrong options for wrapup time are removed. Agents can receive calls after wrapup time again
- Routes: Hints for wrong pattern is added
- SIP-gateway: Configuration parameter "**authuser**" can be entered in advanced parameter
- SIP-gateway: Fallback with channels limit from SIP to ISDN is working now (ISDN to SIP was working also before)
- Users: Admin can sort separately for first or last name
- Users: Admin can see an overview of incoming/outgoing numbers for users
- Users: Admin can see user permissions in the user details
- Users: CLIP is selectable from the home screen
- Voicemail: After own message follows "Please leave your message" is removed

BugFixes:

- The AstButtonDaemon and the call-list purge are working in parallel
- ISDN: External Incoming call to an analog extension - External party is getting now a ringing tone
- Group pickup: Group-pickup key can be configured without need for rebooting the system

Known Issues:

- Hunt Group: Call forward on no answer is not working (planned for 1.1.2)
- Contacts: Email field for private contacts is mandatory (will be optional in a later release!)
- Maxwell 3/basic interop: missed calls not shown, BLF keys loose registration, automatic firmware update not possible
