Askozia

Askozia PBX 5.0 or higher

Askozia

About Askozia

Askozia was originally started as university project focused on building a lightweight software phone system. The project was a great international success, that Benjamin and Sebastian decided in 2010 to start a company. Looking at our competition, we decided that we didn't want to lock our users into a license model where they have to pay for every single channel. We'd rather do something fundamentally different. This is why we do not charge per user and we do not limit our products arbitrary.

The core of all our products is AskoziaPBX, an easy to use IP phone system based on Asterisk. In addition to developing VoIP software, we design and build our Telephony Servers in-house in our headquarters in Hannover, Germany.

Askozia's team consists of experienced engineers that have been working with Voice over IP for more than a decade. We have a customer base of more than 100.000 users in small and medium sized companies all around the world. Askozia is privately held, and did not seek any venture capital. This way, we are not obliged to anybody, except to our customers.

See below for a list with supported features when using the Gigaset PRO IP Devices.

Testresults provided by Askozia Askozia Version 5.0

Supported Devices from Gigaset PRO

Feature	DE310 / DE410 IP PRO	DE700 / DE900 IP PRO	Maxwell basic / Maxwell 3	N510 IP PRO	N720 Multi cell
