

2N® Helios - IP - Installation behind Starface and Gigaset T300/500

The 2N® EntryCom IP station is supported from Gigaset v5.2 on. Operating in a version with video module is possible. The device is configured manually.

Variant EntryCom IP Vario 3 Keys

Variant DoorEntry IP Wantec

Product variants

The 2N EntryCom IP is being marketed in several countries as 2N 2N Helios IP or IP EntryCom. It is technically identical to devices. Furthermore, there is the range of IP Door Entry Wantec company, which is characterized by modified housing. These devices are technically identical and can be configured to meet these guidelines.

Conceptual and preparation of the Gigaset PBX

- The EntryCom IP is configured on the Gigaset PBX as a SIP phone with the profile 2N Helios IP.
 - The username can be chosen individually, e.g. 2n.helios.
 - Please create a password with the random-function of the PBX.
 - Also a DTMF sequence can be stored as convenience feature to trigger a switching function.
 - The DTMF sequence must be completed in the Gigaset PBX with a * (see below for details)
 - The URL for the image EntryCom IP

`http:// <IP-address EntryCom IP> / enu/camera320x240.jpg`

http://<IP-Adresse EntryCom IP>/enu/camera320x240.jpg

- The SIP phone is now a dedicated user is assigned. This can be named as desired, e.g. First name: door; Name: EC
 - The numbers also allow calls to the user of this station. This must be unlocked separately but in the station.
 - By mapping user receives the intercom dialing
 - It is recommended for those users the right to "Phone Log" to deactivate.

Gerätename	Rufnummer klingelt	Aktiv
SIP/2n.helios	SIP/2n.helios	<input checked="" type="checkbox"/>

- The SIP intercom calls when pressing the bell on internal or external numbers.
 - In general, this should be used as a target call group (ring bell Strategy Group, All), in the example with group number 199.
 - All participants in this group are notified accordingly if you ring the bell at the SIP station.
 - Note: The combination with a functional group with a queue module is not currently supported.

Configuration 2N EntryCom IP

When used with the Gigaset PBX EntryCom IP must be operated with a fixed IP address - either by a fixed configuration for the device or via static leases in a DHCP server.

Configuration step by step

Basic Settings > Phone book

The settings of the phone book within the EntryCom defines the destination numbers within the system to be called if such the call button is pressed. There are various settings available here. Below is a simple Standardzenario skizziert.

Normally, the address book entries 1 to 54 are each assigned to a call button at the EntryCom. Unfortunately it is not intuitively obvious which button is assigned which address book entry. Please read the manufacturer's documentation here!

In the example with the IP Door Entry Wantec the only bell of the instrument to the contact 9 is assigned. When you press the call button, the number is called 199.
