

T300/T500 - User import template

Import user accounts on T300 / T500 PRO

The import function enables you to create a large number of user accounts quickly.

For this to work, the user data must be saved in a CSV file and imported in the PBX. Here you can download an excel sheet that you can send to a customer that they can fill in and with one press of the inserted button a CSV file is generated. This file can be used to import the user data.

Please observe the following when editing and saving the template with an editor:

- The individual values must be separated by commas and not by semi-colons!
- Text values are enclosed by double quotes " ".
- The file should be saved in UTF-8 format.

- The files are optimized for Version 5.0.2.1, 5.1.0.11, 5.2.0.10 and 5.3.0.7. Due to additional parameter fields, please use the according sheets.
- The files are NOT working with the 4.6.5.3!!!
- Currently the xls-file is only compatible with MS Excel (32Bit). Other tools like LibreOffice do not support the macros. This might change with a future update of these tools.
