Alarm, Messaging and Location (AML)

Alarm systems are used to inform users about events, which can be low priority events just to inform the user, or emergency events where lives can be saved.
Gigaset offers with the latest software update of the N670 /N870 the possibility to connect existing alarms systems. Alarm systems can send messages, request for an user response and even ask the location of the DECT handset. With the advanced message options, alarm servers can set per message: text, icons, colours, soft-keys, priority and many more.

See: FAQ - Alarm, Messaging and Location
