FAQ - Small size system

Valid for:	~~N610~~	N670	N870	N870E	~~Embedded Integrator~~	~~Virtual Integrator~~

System overview

An small sized system is described below.

	Minimum Size	Maximum Size
DECT Integrator & DECT Manager & DECT Base	1	1
Additional DECT Base	0	9 (1 - 9)
DECT Handsets	*	50
Max. Simultaneous calls for the whole system	8 (There is no additional DECT base connected)	20

* = Number of handsets is based on the required traffic volume (Erlang E).

Recommendation maximum number of handsets.

On the DECT side there are also limitations based on number of DECT channels, signalling,...

We recommend to use maximum 20 DECT handsets per DECT base, more is surely possible but 20 is a realistic number.
