

FAQ 3CX - Firmware update

Introduction

The firmware update of the following devices can be done via:

Device web-interface

- [Maxwell](#)
- [N670/N870](#)

Changing the Maxwell auto-provisioning template.

Maxwell firmware update via auto-provisioning

First you would need to change the gigasetmaxwell.ph.xml provisioning template see this [wiki article](#) how to access the template.

Open the template and search for:

```
<provisioning version="1.1" productID="mx3b">

<!--
<firmware>
  <file version="2.25.6" url="%%PROVLINK%/firmware/gigaset/GC_MAX_2.25.6-release.bin"/>
</firmware> -->
```

Change the template according to the [wiki article](#). You can set the URL to your own server or upload the Gigaset software into the 3CX firmware directory.

- Remove the <!-- and -->
- Change the URL
- Change the version to the software version you want to use

```
<provisioning version="1.1" productID="mx3b">

<firmware>
  <file version="2.25.6" url="<SERVER URL>/firmware/%DVID/GC_MAX_2.25.6-release.bin"/>
</firmware>
```
